| MVVM Architecture | BLOC |
| GetX | Provider |
| Branded Versions Flutter Flavors | Firebase |
| RESTful APIs Integration | Git Version Control |

PROFESSIONAL EXPERIENCE

Flutter Developer
Sapat International

April 2024 – present | Mumbai, India

- Developing the Qr4Order app a multi-functional application that enables users to place orders and provides a robust dashboard for business management, catering to industries such as restaurants and stationery stores. The app is built with key features, include:
 - Dynamic Order Flow: Built an adaptive order management system with customizable statuses and real-time updates to fit diverse business needs.
 - Targeted and General Notifications: Implementing a notification system that allows businesses to send tailored messages to specific users based on their order status or preferences, as well as general announcements to all users for promotions or updates.
 - Comprehensive Dashboard: Designing an intuitive dashboard for efficient order tracking, inventory management, and customer insights, empowering businesses to streamline operations from a central interface.
- Leveraged GetX state management and MVVM architecture to ensure efficient, maintainable, and scalable code, providing a smooth user experience across app features.

Flutter Developer
Your Digital Lift

June 2023 – April 2024 | Mumbai, India

- Utilized Flutter Flavors for managing different app configurations, including:
 - Branded: Version: Created multiple branded versions of the app (e.g., white-label apps for various clients) with unique icons, colors, and assets, providing custom branding for each version.
 - Feature Toggle: Enabled or disabled specific features for certain flavors, allowing for testing of experimental features within isolated environments.
- Proficient in using Provider for state management and implementing the MVVM architectural pattern to write efficient code in Flutter applications.
- Skilled in integrating RESTful APIs into Flutter applications to fetch and display data dynamically.
- Experienced in deploying Flutter Apps on Google Play Store, Apple App Store and Firebase Web hosting.

Flutter Developer - Intern
Redesign Digital

April 2023 – May 2023 | Mumbai, India

- Integrated third party APIs to enable advanced feature such as PhonePay payment gateway,
- Responsible for building cross-platform mobile applications using the Flutter framework.
- Familiar with Firebase services, including Firestore for real-time database functionality, Storage, and Messaging.
- This involves writing efficient and reusable code and implementing the user interface (UI)

PROJECTS

Mindful Mate
Personal Project

June 2024 – June 2024

Play Store Link: https://play.google.com/store/apps/details?id=com.murli.mindful_mate&hl=en

Developed an app to help users cultivate mindfulness in their daily lives. Features include task management, habit tracking, and note-taking, promoting presence, consciousness, and attentiveness.

Customer Engagement App & Website

September 2023 – April 2024

- This platform offers customers a unique blend of social interaction and personal growth tools.
- Users can complete challenges (tasks), share their achievements within a community similar to Instagram, maintain a personal diary, track measurements, and analyze their progress through graphs.
- Implemented localization to support multiple languages
- Introduced app flavors to provide customized configurations for different clients, enhancing the app's accessibility and user experience.

Jarvis: Operations & Tech Team Coordination App

August 2023 – August 2023

- Jarvis a comprehensive coordination app and website, using Flutter and integrating Google Sheets for backend data management.
- Designed to streamline the communication between operation teams and the tech department.
- Jarvis allows operational staff to log queries directly into an app, which are then stored in Google Sheets. Notifications of these queries are dispatched in real-time to the tech team and administrators via both the app and Chrome notifications.

Dynamic Landing Page

July 2023 – July 2023

- Developed an innovative landing page using Flutter that dynamically alters its design and content based on the user input in the URL.
- This project was aimed at enhancing the user experience by providing a highly personalized web interaction

Developed What's Web using Flutter

December 2023 – December 2023

- Led the creation of an innovative real-time communication platform designed to enable seamless interaction between users.
- Enhances key features found in popular messaging apps like WhatsApp, offering text chat, audio messages, video transmissions, and file-sharing capabilities.

Developed a MediCare Software Using Flutter

July 2022 – October 2022

Drive Link: <https://drive.google.com/drive/u/2/folders/1hPkLlirKo90NgrkgP1US8mPO4wvbURFs> ↗

- Developed MediCare Software, this platform enables patients to access medical consultations through messages, video calls, and phones. The project was designed and implemented as a personal initiative to improve healthcare accessibility and patient engagement.

Built a Moodle Website Using HTML5, CSS3 and JavaScript

August 2022 – September 2022
